DOUG NORMAN  
OUR TECHNICIAN

Good luck in finding the On/Off switch! It may be a button or two buttons on the console, or it may be a key in a lock. It may be a toggle switch or a light switch, somewhere on or near the console, behind the organ case, or even in the next room!

Ours is easy--its on the left. Once I had one in a fuse box on the wall at the back of the Chapel ! !

## The Pedal Division

The Pedal keyboard is made like the manual keyboard except that the keys are larger so that they can be played with the feet. The organist has the equivalent of four fingers to use on the pedal keyboard—two toes and two heels. Playing on the pedals is fun and can be learned rather quickly. One can even learn not to look at one's feet. The most difficult thing in learning to play the organ is teaching the hands and feet to work together, especially the left hand and the feet.
